

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: James D. Hooberman

Serial No.: 09/780,177

Group Art Unit: 2611

Filing Date: February 9, 2001

Examiner: Vivek Srivastava

For: VIRTUAL SOUND SYSTEM

**DECLARATION OF PRIOR INVENTION IN THE UNITED STATES
TO OVERCOME A CITED PATENT UNDER 37 CFR 1.131**

I, James D. Hooberman, hereby declare as follows:

1. I am the inventor of the invention disclosed in the above-identified application for patent. The above-identified application for patent claims priority of a provisional patent application Serial No. 60/181,648 filed February 10, 2000, of which I am also the sole inventor.

2. This declaration is to establish completion of the invention being claimed in the above-referenced application in the United States at a date prior to December 28, 1999, which is the effective date of U.S. Patent 6,678,215 that was cited in the non-final Office Action mailed February 24, 2005.

3. The months leading to my reduction to practice were devoted to literature search, market interviews, feature identification, and experimentation. During November and December 1999, I regularly discussed my efforts with my business attorney, Eric Bronstein, and my patent attorney, Avery Goldstein.

4. After deciding to enter the patent process, my patent attorney opened a file corresponding to the provisional application 60/181,648 on January 31, 2000. A provisional patent application draft was prepared and approved by me for filing on February 10, 2000.

5. Based on the above considerations, I do not believe that U.S. Patent 6,678,215 B1 filed March 20, 2000 and claiming priority of a December 28, 1999 filing preceded my actual reduction to practice of the invention in this application.

6. This declaration is submitted prior to final rejection and in response to rejections relying on U.S. Patent 6,678,215 in the Office Action mailed February 24, 2005.

7. I declare that all statements made herein of my knowledge are true and that all statements made on information and belief are believed to be true; that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that willful false statements may jeopardize the validity of the application or any patent issuing thereon.

Signed: /James D. Hooberman/

Dated: May 31, 2005

Receipt is acknowledged of this provisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Office of Initial Patent Examination's Customer Service Center. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the PTO processes the reply to the Notice, the PTO will generate another Filing Receipt incorporating the requested corrections (if appropriate).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 36 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PLEASE NOTE the following information about the Filing Receipt:

- The articles such as "a," "an" and "the" are not included as the first words in the title of an application. They are considered to be unnecessary to the understanding of the title.
- The words "new," "improved," "improvements in" or "relating to" are not included as first words in the title of an application because a patent application, by nature, is a new idea or improvement.
- The title may be truncated if it consists of more than 600 characters (letters and spaces combined).
- The docket number allows a maximum of 25 characters.
- If your application was submitted under 37 CFR 1.10, your filing date should be the "date in" found on the Express Mail label. If there is a discrepancy, you should submit a request for a corrected Filing Receipt along with a copy of the Express Mail label showing the "date in."

Any corrections that may need to be done to your Filing Receipt should be directed to:

VIRTUAL SOUND SYSTEM

Field of the Invention

The present invention relates to a network-based system generating sound masking external noises and selectively modifying system sound output.

5 More particularly, the present invention generates sleep-inducing sounds on a timed basis and thereafter optionally operates as a virtual awaking device.

Background of the Invention

As television, the Internet and other forms of telecommunications merge into a vast worldwide interconnection, individuals find themselves in
10 increasing contact with World Wide Web-based systems. With the advent of Web-based television, it is becoming increasingly common that individuals sleep in proximity to a computer or other Web access device.

In addition to the sound generated by an activated computer or other CRT device, background noise associated with a densely populated, twenty-
15 four hour society means that sleeping in such an environment has become increasingly difficult.

In order to promote sleep, the present invention operates through a networked computer, or other Web-based CRT, to produce sleep-inducing sounds. The sound generated by the present invention serves to mask
20 background noise and induce relaxation.

Brief Description of the Drawings

Figure 1 is a flow chart of an embodiment according to the present invention for virtual sound generation to induce sleep; and

Figure 2 is a flow chart of another embodiment of the present invention operative in waking an individual.

Detailed Description of the Preferred Embodiments

The present invention has utility in generating sounds conducive to tranquility and/or sleep. The Web-based nature of the present invention provides a variety of sleep-inducing sounds to be accessed by a user. Further, the present invention is readily accessible by a traveler with Web access without the need to carry a sound-inducing appliance.

Referring to Figure 1, a system for inducing sleep through virtual sound generation according to the present invention is shown. A user connection to the Internet 12 or other network is established. A user connection to the Internet is established directly or by way of a provider-based access network (not shown). The access network illustratively includes a telephone; cable television; or on-line service network, including, for example, CompuServe, America Online and the like. A user then accesses a Web page or set up screen associated with the present invention 14. A Web page according to the present invention prompts a user as to the necessary inputs for creating sleep-inducing sound. Optionally, the Web page of the present invention includes links 16 to sleep-related materials illustratively including products, advertisements, sleep-related research information and a chat room. The links 16 are intended to provide information about sleep disorders, products and techniques associated with inducing somnolence and interaction with other users in a similar situation. From the invention Web page, a user is prompted to select a desired

sound generator 18. Sound modes available to a user include a repetitive oscillatory sound having a frequency of between 3 and 30 Hz. Oscillatory sounds in the frequency range given and preferably between 5 and 15 Hz are well known to induce relaxation and somnolence. Optionally, a volume control and timer are provided 20 to optimize the rhythmic effect and duration of the oscillatory sound. Additional relaxation inducing sounds according to the present invention illustratively include recorded or simulated sounds associated with a relaxing setting such as a beachfront, forest or pastoral setting. Alternatively, soothing musical forms illustratively including instrumentals, classical and rhythmic vocal music are also available to a user. The soundtrack selected by a user being accessed directly from the Web site or alternatively downloaded and stored on the user network access device memory. Optionally, after sampling the sound generator of the present invention, a user has a series of Web-based controls consistent with sound quality adjustment of the user Web access device speaker illustratively including treble, bass, surround sound and fade.

Optionally, the sound generator of the present invention is coupled with a visual stream incorporating patterns and/or colors modulated in concert with the output of the inventive sound generator 22. Thus, the virtual sound system of the present invention after user setup operates either with an inactive visual display or a visual stream modulated in concert with sound generator output.

Another aspect of the present invention operative as an accessory to the embodiment depicted in Figure 1 or alternatively as an independent

embodiment is depicted in Figure 2. A user connects to the network or Internet 12'. The user then accesses the inventive Web page 14' which has links to sleep related subject matter 16'. Inventive steps 12', 14' and 16' as described with reference to 12, 14 and 16, respectively. After a user has accessed the present invention and optionally investigated links to sleep-related subject matter 16', a user inputs a desired wakeup time 28. In this embodiment of the present invention, a virtual alarm clock is provided. Following the user selecting a desired activation time (t) 28, an optional confirmatory prompt 29 is provided assuring that the user knows the current local time and a display thereof is constantly provided. Thereafter, the user selects a desired waking signal 30. The waking signal according to the present invention illustratively includes an auditory alarm sound, music, a television or radio broadcast, or a user preselected video which is played from a source illustratively including an on-line video, a cable TV channel, a DVD player or VCR. Thus, a user can preselect a video to awaken the user upon activation of the present invention. In instances where a user is awoken by music, the music is alternatively downloaded to the user network or Web access device or streamed directly from the Web site of the present invention. Television or radio broadcasts being accessed through a hyperlink selected by the user in advance of activation. Following user input in regard to wakeup time, mode of wakeup signal and the like, the virtual system of the present invention switches to a display energy saving mode having a blank visual display. Upon time lapse until activation time, the preselected waking signal is activated 32 and remains

in the active state until disabled by an additional user input command 34. Optionally, the virtual alarm active state according to the present invention includes preselected “snooze” periods which promote a stepwise waking process. It is appreciated that an embodiment of the present invention for
5 generating sleep-inducing sound is readily coupled with an alarm clock embodiment of the present invention to thereby promote sleep and assure waking at a desired time.

It is understood that the embodiments described herein are merely illustrative and not intended to limit the scope of the invention. It is
10 appreciated that various changes, modifications and alterations will be readily apparent to one skilled in the art without departing from the spirit and scope of the present invention. These are intended to fall within the scope of the appended claims.

Claims

1 1. A virtual sound system comprising:
2 a network-based program for generating sleep inducing sounds at a user
3 location.

1 2. The system of claim 1 wherein said sound has a frequency
2 between 3 and 30 Hz.

1 3. The system of claim 1 wherein said program is linked to a Web
2 site.

1 4. The system of claim 1 further comprising a sound controller
2 selected from the group consisting of volume control and sound play duration.

-----1 5. The system of claim 1 further comprising a visual stream-----
2 changing in concert with said sound.

1 6. The system of claim 1 further comprising an alarm clock routine.

1 7. A virtual sound system comprising:
2 a network-based program for creating an auditory alarm signal at a user
3 location in response to an input of an activation time t.

1 / 8. The system of claim 6 wherein said auditory alarm signal is a
2 television broadcast.

1 9. The system of claim 6 wherein said auditory alarm is a user
2 preselected video.

1 10. The system of claim 9 wherein said video is an output of a
2 source selected from a group consisting of: on-line video stream, DVD and
3 VCR.
